Art Unit: 3739

DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- Claims 1-19 and 48 drawn to an end-effector device, classified in class606, subclass 41.
- II. Claims 20-27 and 44-46 drawn to an electrosurgical instrument, classified in class 606, subclass 41.
- III. Claims 28-35, drawn to a method of making an end-effector, classified in class 128, subclass 898.
- IV. Claims 36-43, drawn to a method of performing a robotic surgical procedure, classified in class 128, subclass 898.
- Claim 47, drawn to a robotical surgical system, classified in class 606, subclass 34.

The inventions are distinct, each from the other because of the following reasons:

Inventions I, II and V are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because any generic end effector can be used with the system. The subcombination has separate utility such as end effector use with a manual electrosurgical device.

^e Application/Control Number: 10/611,411

Art Unit: 3739

Inventions I, II, V and IV are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the system need not be robotical.

Inventions I and III are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case that the product as claimed can be made by another and materially different process.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Because these inventions are distinct for the reasons given above and the search required for Groups I-V is not required for Groups I-V, restriction for examination purposes as indicated is proper.

A telephone call was made to Mark Barrish on 5-26-05 to request an oral election to the above restriction requirement, but did not result in an election being made.

Application/Control Number: 10/611,411

Art Unit: 3739

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Peter J. Vrettakos whose telephone number is 571-272-4775. The examiner can normally be reached on M-F 9-6.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Linda C. Dvorak can be reached on 571-272-4764. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
